KDG4V-3S and KTG4V-3S Application Data

Specifications

Maximum operating pressure (A, B and P ports)

350 bar (5000 psi)

Maximum tank line pressure (T port) K*G4V-3S:100 bar (1450 psi)

Maximum recommended pressure drop (four-way models at max. flow) 210 bar (3000psi)*

*At pressure drops above 10 bar (145 psid) dither amplitudes in the electronic controller may need to be set at or near minimum to eliminate potential high frequency circuit noise.

KTG4V-3S-*–60 . . 1,75 kg (3.85 lbs.)

Performance

Frequency Response

18Hz @ -3db
(10Hz @ 45 degree phase lag)
For an amplitude of 25% max stroke (center to offset) about the 50% position and ΔP (P–A–B–T) = 10 bar (145 psid). See graph on page 14.

Hysteresis

With pulse width modulation: 4%
With direct DC voltage (GP & HA): 8%

Repeatability: 1%

Deadband : 15–35%
of full solenoid input. Vickers electronic controllers have a deadband eliminator to reduce this value to near zero.

Step Response Time

The following response times were measured from the point of energization/de-energization to the point of first indication of inlet pressure change.

Response up to full system pressure is dependent on the system's compressed volume and can vary with each application.

100 msec

100–0% (full spool travel to center – fast drop out)
15 msec

10–90% (10% full flow to 90% full flow)
100 msec

90–10% (90% full flow to 10% full flow)
25 msec

100–100% (100% full flow travel in one direction to 100 % full flow travel in the reverse direction)
80 msec

Spool, Spool/Spring, Metering

Refer to the table below for the available spools, spool/spring arrangements and metering conditions.

For example, if a KD valve with a "33" spool is required, the spool/spring arrangement is "C" and the metering condition available is "A". Refer to "Model Code" for a definition of these codes.

Model	Spool	Spool/Spring Arrangement	Metering Condition
